

Mazzuma is a mobile payments ecosystem that uses Artificial Intelligence and Blockchain to facilitate transactions.

Its headquarters is located in Accra, Ghana.

Mazzuma was founded in 2015 by Kofi Genfi and Nii Osae Dade who were both named in Forbes Africa 30 under 30 Technology category in 2018.

Mazzuma currently has over 300,000 customers that use its service to make payments and receive remittances.

Mazzuma's platform uses its service to make payments and receive remittances.

Its partner companies include MTN Ghana, Vodafone, United Nations Development Programme, AirtelTigo, RemitONE, National Entrepreneurship and Innovation Plan and Crypto Valley.

Mazzuma has processed transactions and with its Application Programming Interface (API), integrated E-commerce stores and developers into its system.

In November 2021, Mazzuma was part of a collaboration between the Binance Smart Chain's \$1 Billion Growth Fund and CV VC to drive blockchain adoption in Africa.

Mazzuma was also one of 4 African blockchain startups to secure funding and support from CV VC.

The Mazzuma Token is also called MAZ token. It is a digital asset that utilizes a distributed infrastructure and cryptocurrency to enable seamless payments.

To acquire MAZ Tokens, you first need to set up a Mazzuma account to verify your identity.

You can acquire MAZ Tokens through digital exchanges.

Currently, we are listed on BitForex. Also, keep an eye out for our airdrops.

The Mazzuma mobile app will be the primary medium of exchange for the MAZ token.

Users will be able to send MAZ tokens to other users and authorize transactions on the Mazzuma platform instantly.

MAZ tokens are completely secure and cannot be transferred without a user's authorization.

There are no transaction fees when sending MAZ. However, exchanges might charge a fee when changing your MAZ for fiat.

You can have as many accounts as possible, However, you can set up one account per email.

You can access the Mazzuma Dashboard from your computer. However, you can only make transactions from the Mazzuma app.

Decentralized Finance or DeFi refers to financial applications and projects based on blockchain technology that are aimed at redefining financial transactions in this era by removing intermediaries like banks or stocks exchanges as opposed to traditional financial methods.

DeFi uses smart contracts, automated enforceable agreements that do not need intermediaries to execute minimizing the need to trust and rely on a central authority and ensures safety in finance.
